1. Company Information

Company	Pacific Research Group LLC
Address	2827 E Coolidge Ave, Orange, CA 92867
Point of Contact	Andrew O'Donnell, Managing Director · Andrew@pacificresearchllc.com · (650) 213-2381
UEI / CAGE	J585TLDV1CH1 / 1Z9B6 (SAM.gov: Active)
Business Size	Small business under NAICS 561210 (SBA size standard \$47.0M)
Socioeconomic Status	SBA-certified SDVOSB (VetCert); Veteran-Owned Small Business
Contract Vehicles	None currently held; open-market and set-aside acquisitions

2. Capability and Delivery Model

PRG is a service-disabled-veteran-owned prime contractor whose model is program management of qualified execution partners. For this requirement PRG would perform as prime with a small U.S. management cell (program manager, quality manager, WMS administrator) and deliver trade execution through established, licensed host-nation facility-maintenance and specialty firms in Japan under PRG's scheduling, quality control, safety, and reporting systems. In the interest of accurate market research, PRG states its position plainly: PRG is recently established and does not yet hold entity-level past performance managing a facility-maintenance program of this size; its offer to the Government is a compliant SDVOSB prime structure over experienced host-nation execution capacity, with the relevant experience elements below.

- **DoD-standard equipment maintenance discipline:** PRG's Managing Director is an AAMI Certified Biomedical Equipment Technician (USAF-trained) who managed over \$2M in medical equipment infrastructure at greater than 98% preventive-maintenance and compliance rates under Joint Commission and DoD accreditation standards; directly transferable to PM scheduling, work-order documentation, AQL compliance, and equipment lifecycle reporting under a WMS.

- **Military installation operations:** U.S. military veteran; large-scale interagency operations experience (Operation Allies Welcome, 25,000+ evacuees) including installation access, security procedures, and federal compliance reporting.
- **Educational and institutional facilities:** delivered through host-nation partners with school and institutional maintenance portfolios; PRG enforces child-safety, escort, and background-screening requirements as prime.
- **Trades coverage:** facility maintenance, HVACR, sports field and playground inspection/maintenance (CPSI-aligned), and commercial kitchen equipment delivered through licensed Japanese firms; bilingual site management for base access and school coordination.
- **Recruitment and retention:** PRG operates an active recruiting engine (public careers platform plus host-nation channels); site leadership hired locally with retention incentives tied to contract option years.
- **Host-nation compliance:** PRG's workflow requires anti-corruption vetting of every partner and hire, host-nation labor-law compliance review, and licensing verification before subcontract award.

3. Industry Feedback on the Draft PWS

- **Lot structure:** consider two regional lots (Tohoku/Misawa; Kanto Plain: Yokota/Zama/Sagamihara). The regions are ~700 km apart; separate lots reduce mobilization cost, widen small business participation, and match Japanese subcontractor geography.
- **Minor repair threshold:** \$2,500 is low for current Japanese labor and material costs; \$5,000 would reduce administrative order volume and better reflect commercial practice.
- **Response times:** state explicitly whether resident on-campus staffing is required per school or whether regional response teams satisfy requirements; this is the dominant cost driver across 968K SF and 8 campuses.
- **Historical data:** releasing 24 months of work-order history by school and category with the RFP would tighten all offerors' pricing.
- **Pricing structure:** FFP per school for scheduled maintenance; labor-rate schedule for non-routine repairs; economic price adjustment for JPY/USD movement and Japanese wage growth over option years.
- **Playgrounds/fields:** require CPSI-certified inspection standards explicitly; monthly visual + annual certified inspection is standard commercial practice.
- **SOFA considerations:** clarify expectations for contractor personnel status, base access sponsorship, and vehicle access for subcontractor crews at each installation.

4. Rough Order of Magnitude (ROM) — Annual, Parametric

Based on the notice's stated inventory (967,608 gross SF across 13 facilities; 14 playgrounds, 20 courts, 4 sports fields) and commercial K-12 full-service maintenance benchmarks with a Japan delivery factor. Strictly market-research input; notional and nonbinding.

Category	Estimated Annual Fixed Price (USD)
Facility Maintenance Services (~968K SF)	\$1.9M – \$2.6M
HVACR Maintenance	\$0.7M – \$1.0M
Sports Field and Playground Maintenance (14/20/4)	\$250K – \$400K
Indicative annual total	\$2.9M – \$4.0M
Non-routine repair labor rates	\$65 – \$95/hr by trade (Japanese national labor, fully burdened, incl. PRG management)

Assumptions: Japanese national trade labor at prevailing wages with statutory social costs; parts/materials at cost plus handling; Government-provided utilities and base access sponsorship; sampling-based surveillance; ranges narrow with work-order history. **Mobilization:** 60–90 days; bilingual site leads hired locally per region. **Subcontracting approach:** licensed Japanese facility-maintenance firms under PRG prime management; limitations-on-subcontracting compliance structured at proposal per the final set-aside determination.

PRG appreciates DoDEA's engagement with small business and supports acquisition structures (including regional lots) that enable meaningful SDVOSB participation. PRG confirms interest in the resulting solicitation.
